NGINX Deployment - Project 1

Luyiza Kamelchuk

Goal

Run the PHP API through NGINX instead of the built-in PHP server.

Ensure php and nginx are updated and ready

```
sudo systemctl restart php8.4-fpm
sudo systemctl restart nginx
```

Connecting NGINX with the project files - NGINX config file

```
server {
    listen 80;
    server_name localhost;

    root /home/ase230/project1/code; #this will vary, update to your correct root
    index index.php;

    location / {
        try_files $uri $uri/ /index.php?$query_string;
    }

    location ~ \.php$ {
        fastcgi_pass 127.0.0.1:9000;
        fastcgi_index index.php;
        fastcgi_param SCRIPT_FILENAME $document_root$fastcgi_script_name;
        include fastcgi_params;
    }
}
```

Saving Changes

Always check that your configuration is correct with (nginx -t)

```
nginx: the configuration file /etc/nginx/nginx.conf syntax is ok
nginx: configuration file /etc/nginx/nginx.conf test is successful
```

Reload to confirm changes were saved (service nginx reload)

If the file has been connected properly...

You should be able to view your files while running nginx.

```
curl http://localhost/students
```
